PROFESSIONAL SUMMARY

Platform and Systems Operations focused engineer experienced in building and running internal developer platforms and self-hosted infrastructure: Docker-based multi-server CI/CD pipelines, Git server provisioning with role-based SSH access, and reusable automation (Git hook templates) that gives development teams consistent, zero-touch deployment paths. skilled in day-to-day systems operations, endpoint security monitoring. Targeting Platform Engineer and Systems Operations Engineer roles focused on infrastructure reliability, security operations, and incident troubleshooting.

EXPERIENCE

Systems R&D Intern | Winman software India LLP

Feb 2026 – May 2026

- Architected a secure self-hosted Git server with role-specific SSH-key-based access read/write users, improving repository security and access management.
- Implemented WSUS for Windows update management ensured systems are up-to-date with the latest security patches.
- Coordinated with Sophos Central and vendor teams to configure and validate endpoint security deployment strategies.
- Set up secure OpenSSH connectivity between Linux servers and Windows clients to support cross-platform automation workflows developed by the automation team, improving remote task execution and operational efficiency.
- Deployed and troubleshot “chatwoot” for the sales team by validating webhook integrations and finalizing a Docker-based production deployment, improving customer communication and workflow management.
- Configured email notifications in “GLPI” and “Wazuh” based on organizational requirements to improve monitoring and incident response.
- Troubleshot a Symantec Endpoint Protection (RU4) 600s connection block, diagnosing it as a false positive and working with the security team to restore connectivity while preserving endpoint protection integrity.

EDUCATION

Pre-University Education / XII (PCM-CS) – 94.67%

Nov 2020 – Mar 2022

PACE UM PU College.

B.E. in Computer science and Engineering – 9.28/10 CGPA

Nov 2022 – Aug 2026

Jawaharlal Nehru New College of Engineering.

SKILLS

- **DevOps & Automation:** Git, Bash, Docker, CI/CD Jenkins, ArgoCD, Kubernetes.
- **Security & Monitoring:** OpenSSH, Sophos-EDR, Wazuh, Prometheus.
- **System Operations:** GLPI, WSUS, Linux (Ubuntu).
- **Backend & Databases:** Python, Django, Daphne, Celery, Redis, PostgreSQL.
- **Soft skills:** Attention to detail, Teamwork, Time management.
- **Languages:** Kannada (Fluent), English (Professional), Hindi (Conversational).

PROJECTS

Stage Flow - Self-Hosted Infrastructure & Deployment Platform

Jun 2026 – Aug 2026

Self-hosted infrastructure and deployment platform built across three dedicated servers, automating the entire path from code commit to production deployment. Combines version control, CI/CD automation, and Kubernetes-based GitOps deployment with real-time production monitoring.

- Git Server: Hosts a self-hosted Git server with role-specific SSH-key access for secure, centralized version control.
- Build Server: Runs Jenkins, auto-triggering on master branch commits to build Docker images and push them to a private container registry.
- Production Server: Runs Kubernetes, Argo CD, and Prometheus, handling automated GitOps deployments and real time infrastructure monitoring.

Hyper Dev – A Freelance and Work Management Platform

Jun 2024 - Aug 2025

- Implemented secure OAuth, two-step email verification, and RSA-based authentication to enhance platform security.
- Designed role-based access control and notification systems for streamlined user management and communication.
- Integrated real-time private/team chat and article publishing features to improve collaboration and content sharing.
- Implemented sentiment-based project rating using “textblob” for improved open-source project feedback analysis.

CERTIFICATION & BADGES

- AWS Cloud Practitioner Essentials Assessment - AWS Introduction to Cloud 101
